Confused about Information Blocking?

**Any request for EHI,
not just patient requests**

+

**All healthcare
providers**

Start here.

1 Analyze how often you are not fulfilling requests for EHI today and for what reasons.

2 Map all the sources of health data for your organization.

3 Document organizational policies covering privacy, security and other practices related to releasing health information.

4 Meet with your compliance, privacy and/or legal teams to confirm what policies and procedures relating to release of health information may need to be updated.

5 Join or create a cross-functional team, including IT, that is planning for information blocking compliance with a roadmap for the next few years.

6 Prepare staff and patient education materials.
