

# Suspecting Analytics

We apply our expertise working with providers to ensure payers can select the right records, predict outcomes, and execute at a higher level.

See what real data can do for your risk adjustment and quality programs.

## Provider Knowledge is Everything

We retrieve millions of records for payers each year, 15 million in 2018. This means our provider knowledge runs deep with 700k+ providers in our database, and counting. The provider relationship is key for a successful risk or quality program, and to alleviate the most common concerns:

- Provider Abrasion
- Providers Not Participating
- Low retrieval rates

### Member Analytics

Our member analytics are unmatched in breadth and accuracy. Organizations have chosen Ciox as their risk adjustment source because of our ability to accurately predict risk score inaccuracies and the providers most likely to correct the inaccuracy.

### Provider Analytics

No other company in the United States has the volume of provider interactions as Ciox. Each interaction informs our data sets, which leads to faster turnaround time, lower provider abrasion, and decreased provider fees.

### Quality Analytics

Our quality analytics ensure your member population is set for most favorable and accurate quality measures. Combined with our provider knowledge, no other analytics vendor can better predict and close quality gaps in our industry.

# CIOX ANALYTICS FEATURES & BENEFITS

## Full Service Suspecting Analytics
